

MASTER PROMPT TO BUILD WEBSITE

Analyze the website reference image I uploaded and create a highly detailed, copy-paste-ready prompt for Google AI Studio.

My goal is to build a professional, fully responsive, client-ready website inspired by this reference design.

Important instructions:

- Carefully analyze the complete visual style of the reference image.
- Understand the layout, spacing, typography, color palette, section structure, cards, buttons, backgrounds, shapes, image placement, alignment, and overall design language.
- Keep the same overall premium visual direction and design quality, but do NOT copy any brand name, logo, copyrighted text, or exact business identity from the reference.
- Turn the reference into an original website design.

Create a detailed Google AI Studio prompt that includes:

1. Overall website style and visual direction
2. Exact layout direction for every section
3. Hero section structure
4. Navigation/header design
5. Typography style and hierarchy
6. Color palette based on the reference
7. Buttons and CTA styles
8. Card design and section styling
9. Background effects, gradients, shadows, borders, and visual depth
10. Image placement and image style
11. Smooth animations, hover effects, scrolling effects, and micro-interactions where appropriate
12. Fully responsive behavior for desktop, tablet, and mobile
13. Clean professional footer
14. Strong conversion-focused content and CTAs
15. Generate all required high-quality images automatically if possible
16. Do not use placeholder images or empty image boxes
17. Make the final website look polished, premium, modern, and suitable to sell to a real client

Now write ONLY one complete, detailed prompt that I can directly paste into Google AI Studio to generate the website after that i can deploy it on hostinger.

Do not explain the reference image separately.
Do not give me suggestions or multiple options.
Give me only the final Google AI Studio website-building prompt.
